

## For Immediate Release

### **COMPRO completes installation of Legacy Computer Replacement System (LCRS) at the KSG/GFS Nuclear Power Plant Simulator Center in Essen-Kupferdreh Germany**

Contract extends the operational capabilities of the original SelBUS host systems.

**Melbourne, FL (May 2, 2008)** – COMPRO, a global supplier of highly deterministic, real-time computers and simulation systems, announced today that it has completed the installation of an LCRS system under a contract awarded in November 2007 by the Isar Nuclear Power Plant (KKI), Essenbach, Germany to replace the simulated KKI Plant Process computer at the Simulator Center. LCRS is a drop-in SEL/Gould/Encore host computer replacement solution that runs unmodified legacy code on COTS hardware/software, delivering 100% code compatibility and dramatically improved performance at a fraction of the cost and risk of traditional re-hosting.

Under the contract, COMPRO and its UK affiliate, Encore UK, performed installation of the test system which be evaluated at the Simulation Center. Now that the proof-of-concept evaluation has been completed, additional LCRS systems are planned at the simulator for the purpose of analyzing the possibility for replacement of the real Process Plant computers.

## **About COMPRO**

COMPRO and its worldwide affiliate Encore companies are providers of mission-critical defense and commercial simulation, data acquisition, and process control solutions. COMPRO is a turnkey provider of flight simulation products and services, and offers a wide range of simulation product solutions for military and commercial customers ranging from Flight Training Devices to classroom learning systems. COMPRO products include MUSE™, an innovative simulation software suite with a state-of-the-art Graphical User Interface (GUI) Toolkit, SimBright™ Visual solutions, and Real-Time clustering for imaging, data acquisition, air space / battlefield management, and flight simulation applications. COMPRO and its affiliates provide COTS migration solutions, support services, and full logistics support for Encore, Gould, SEL, SGI®, HP®, and Sun® systems.

COMPRO was established in 1985. The company is a direct supplier to customers with mission-critical needs and a technology supplier to OEMs and Systems Integrators. Over 10,000 COMPRO systems service a world-wide base of 3,000 customers with over \$1.5B of installed products. COMPRO's North American operations are headquartered in Melbourne, Florida and Denver, Colorado. Global locations include Brazil, UK, Italy, Spain, France, Germany, Belgium and Japan.
